Presentation

I take my first steps in the world of image when I was very young. My training started with Image and Sound studies. However, the technique shrinks without the dialogue and the creativity of the arts. So the best option for me was the philosophy. But the other hand, the race for the movement had arrived in the end. I needed to dominate the static image, I studied photography. Then the computer science opened a new horizon of possibilities. The programs of design, edition and animation represented a new challenge and I didn't want to lose the opportunity. What can I offer? Full disposition to the job, capacity of initiative, team work, constancy, experience, creativity and enthusiasm.
